

Final Assignment

April 1, 2025

Extracting and Visualizing Stock Data

Description

Extracting essential data from a dataset and displaying it is a necessary part of data science; therefore individuals can make correct decisions based on the data. In this assignment, you will extract some stock data, you will then display this data in a graph.

Table of Contents

- Define a Function that Makes a Graph
- Question 1: Use yfinance to Extract Stock Data
- Question 2: Use Webscraping to Extract Tesla Revenue Data
- Question 3: Use yfinance to Extract Stock Data
- Question 4: Use Webscraping to Extract GME Revenue Data
- Question 5: Plot Tesla Stock Graph
- Question 6: Plot GameStop Stock Graph

Estimated Time Needed: 30 min

Note:- If you are working Locally using anaconda, please uncomment the following code and execute it. Use the version as per your python version.

```
[2]: !pip install yfinance
      !pip install bs4
      !pip install nbformat
      !pip install --upgrade plotly
```

from plotly.subplots import make_subplots

```

```

[16]: import plotly.io as pio
pio.renderers.default = "iframe"

```

In Python, you can ignore warnings using the warnings module. You can use the filterwarnings function to filter or ignore specific warning messages or categories.

```

[17]: import warnings
# Ignore all warnings
warnings.filterwarnings("ignore", category=FutureWarning)

```

0.1 Define Graphing Function

In this section, we define the function `make_graph`. You don't have to know how the function works, you should only care about the inputs. It takes a dataframe with stock data (dataframe must contain Date and Close columns), a dataframe with revenue data (dataframe must contain Date and Revenue columns), and the name of the stock.

```

[3]: def make_graph(stock_data, revenue_data, stock):
    fig = make_subplots(rows=2, cols=1, shared_xaxes=True,
↳ subplot_titles=("Historical Share Price", "Historical Revenue"),
↳ vertical_spacing = .3)
    stock_data_specific = stock_data[stock_data.Date <= '2021-06-14']
    revenue_data_specific = revenue_data[revenue_data.Date <= '2021-04-30']

```

```

fig.add_trace(go.Scatter(x=pd.to_datetime(stock_data_specific.Date,
↪infer_datetime_format=True), y=stock_data_specific.Close.astype("float"),
↪name="Share Price"), row=1, col=1)
fig.add_trace(go.Scatter(x=pd.to_datetime(revenue_data_specific.Date,
↪infer_datetime_format=True), y=revenue_data_specific.Revenue.
↪astype("float"), name="Revenue"), row=2, col=1)
fig.update_xaxes(title_text="Date", row=1, col=1)
fig.update_xaxes(title_text="Date", row=2, col=1)
fig.update_yaxes(title_text="Price ($US)", row=1, col=1)
fig.update_yaxes(title_text="Revenue ($US Millions)", row=2, col=1)
fig.update_layout(showlegend=False,
height=900,
title=stock,
xaxis_rangeslider_visible=True)
fig.show()
from IPython.display import display, HTML
fig_html = fig.to_html()
display(HTML(fig_html))

```

Use the `make_graph` function that we've already defined. You'll need to invoke it in questions 5 and 6 to display the graphs and create the dashboard. > **Note: You don't need to redefine the function for plotting graphs anywhere else in this notebook; just use the existing function.**

0.2 Question 1: Use yfinance to Extract Stock Data

Using the `Ticker` function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is Tesla and its ticker symbol is TSLA.

```

[11]: import yfinance as yf
import pandas as pd

tesla_ticker = yf.Ticker("TSLA")

```

Using the ticker object and the function `history` extract stock information and save it in a dataframe named `tesla_data`. Set the `period` parameter to "max" so we get information for the maximum amount of time.

```

[12]: tesla_data = tesla_ticker.history(period="max")

```

Reset the index using the `reset_index(inplace=True)` function on the `tesla_data` DataFrame and display the first five rows of the `tesla_data` dataframe using the `head` function. Take a screenshot of the results and code from the beginning of Question 1 to the results below.

```

[15]: tesla_data.reset_index(inplace=True)
print(tesla_data.head())

```

	index	Date	Open	High	Low	Close \
0	0	2010-06-29 00:00:00-04:00	1.266667	1.666667	1.169333	1.592667
1	1	2010-06-30 00:00:00-04:00	1.719333	2.028000	1.553333	1.588667

2	2	2010-07-01	00:00:00-04:00	1.666667	1.728000	1.351333	1.464000
3	3	2010-07-02	00:00:00-04:00	1.533333	1.540000	1.247333	1.280000
4	4	2010-07-06	00:00:00-04:00	1.333333	1.333333	1.055333	1.074000

	Volume	Dividends	Stock Splits
0	281494500	0.0	0.0
1	257806500	0.0	0.0
2	123282000	0.0	0.0
3	77097000	0.0	0.0
4	103003500	0.0	0.0

0.3 Question 2: Use Webscraping to Extract Tesla Revenue Data

Use the `requests` library to download the webpage <https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/revenue.htm> Save the text of the response as a variable named `html_data`.

```
[45]: import requests

url = "https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/
↳IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/revenue.htm"

response = requests.get(url)

html_data = response.text
```

Parse the html data using `beautiful_soup` using parser i.e `html5lib` or `html.parser`.

```
[46]: from bs4 import BeautifulSoup

soup = BeautifulSoup(html_data, "html.parser")
```

Using `BeautifulSoup` or the `read_html` function extract the table with `Tesla Revenue` and store it into a dataframe named `tesla_revenue`. The dataframe should have columns `Date` and `Revenue`.

Step-by-step instructions

Here are the step-by-step instructions:

1. Create an Empty DataFrame
2. Find the Relevant Table
3. Check for the Tesla Quarterly Revenue Table
4. Iterate Through Rows in the Table Body
5. Extract Data from Columns
6. Append Data to the DataFrame

[Click here](#) if you need help locating the table

Below is the code to isolate the table, you will now need to loop through the rows and columns

```
soup.find_all("tbody")[1]
```

If you want to use the `read_html` function the table is located at index 1

We are focusing on quarterly revenue in the lab.

```
[47]: !pip install lxml
import pandas as pd
from io import StringIO

import pandas as pd
from io import StringIO

tables = pd.read_html(StringIO(html_data))

tesla_revenue = tables[1]

tesla_revenue.columns = ["Date", "Revenue"]

tesla_revenue["Revenue"] = tesla_revenue["Revenue"].str.replace(",", "").str.
    ↪replace("$", "")

print(tesla_revenue.tail())
```

Requirement already satisfied: lxml in /opt/conda/lib/python3.12/site-packages (5.3.1)

	Date	Revenue
49	2010-06-30	28
50	2010-03-31	21
51	2009-12-31	NaN
52	2009-09-30	46
53	2009-06-30	27

Execute the following line to remove the comma and dollar sign from the `Revenue` column.

```
[48]: tesla_revenue["Revenue"] = tesla_revenue['Revenue'].str.replace(',|\$', "")
```

Execute the following lines to remove an null or empty strings in the `Revenue` column.

```
[49]: tesla_revenue.dropna(inplace=True)

tesla_revenue = tesla_revenue[tesla_revenue['Revenue'] != ""]
```

Display the last 5 row of the `tesla_revenue` dataframe using the `tail` function. Take a screenshot of the results.

```
[51]: print(tesla_revenue.tail())
```

	Date	Revenue
48	2010-09-30	31
49	2010-06-30	28
50	2010-03-31	21
52	2009-09-30	46
53	2009-06-30	27

0.4 Question 3: Use yfinance to Extract Stock Data

Using the `Ticker` function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is GameStop and its ticker symbol is `GME`.

```
[33]: import yfinance as yf
import pandas as pd

gme_ticker = yf.Ticker("GME")

gme_data = gme_ticker.history(period="max")

gme_data.reset_index(inplace=True)
```

Using the ticker object and the function `history` extract stock information and save it in a dataframe named `gme_data`. Set the `period` parameter to `"max"` so we get information for the maximum amount of time.

```
[34]: gme_data = gme_ticker.history(period="max")

gme_data.reset_index(inplace=True)
```

Reset the index using the `reset_index(inplace=True)` function on the `gme_data` DataFrame and display the first five rows of the `gme_data` dataframe using the `head` function. Take a screenshot of the results and code from the beginning of Question 3 to the results below.

```
[ ]: import yfinance as yf
import pandas as pd

gme_ticker = yf.Ticker("GME")

gme_data = gme_ticker.history(period="max")

gme_data.reset_index(inplace=True)

print(gme_data.head())
```

0.5 Question 4: Use Webscraping to Extract GME Revenue Data

Use the `requests` library to download the webpage <https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN->

SkillsNetwork/labs/project/stock.html. Save the text of the response as a variable named `html_data_2`.

```
[ ]: import requests

url = "https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/
↳IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/stock.html"

response = requests.get(url)

html_data_2 = response.text
```

Parse the html data using `beautiful_soup` using parser i.e `html5lib` or `html.parser`.

```
[3]: from bs4 import BeautifulSoup

soup = BeautifulSoup(html_data_2, "html.parser")

print(soup.prettify()[:500])
```

```
<!DOCTYPE html>
<!-- saved from url=(0105)https://web.archive.org/web/20200814131437/https://www
.macrotrends.net/stocks/charts/GME/gamestop/revenue -->
<html class="js flexbox canvas canvastext webgl no-touch geolocation postmessage
websqldatabase indexeddb hashchange history draganddrop websockets rgba hsla
multiplebgs backgroundsize borderimage borderradius boxshadow textshadow opacity
cssanimations csscolumns cssgradients cssreflections csstransforms
csstransforms3d csstransitions fontface ge
```

Using `BeautifulSoup` or the `read_html` function extract the table with `GameStop Revenue` and store it into a dataframe named `gme_revenue`. The dataframe should have columns `Date` and `Revenue`. Make sure the comma and dollar sign is removed from the `Revenue` column.

Note: Use the method similar to what you did in question 2.

[Click here](#) if you need help locating the table

Below is the code to isolate the table, you will now need to loop through the rows and columns

```
soup.find_all("tbody")[1]
```

If you want to use the `read_html` function the table is located at index 1

```
[31]: import pandas as pd
from io import StringIO

tables = pd.read_html(StringIO(html_data_2))
```

```

gme_revenue = tables[1]

gme_revenue.columns = ["Date", "Revenue"]

gme_revenue["Revenue"] = gme_revenue["Revenue"].str.replace(",", "").str.
    ↪replace("$", "")

gme_revenue.dropna(inplace=True)

gme_revenue = gme_revenue[gme_revenue["Revenue"] != ""]

print(gme_revenue.tail())

```

	Date	Revenue
57	2006-01-31	1667
58	2005-10-31	534
59	2005-07-31	416
60	2005-04-30	475
61	2005-01-31	709

Display the last five rows of the `gme_revenue` dataframe using the `tail` function. Take a screenshot of the results.

```
[7]: print(gme_revenue.tail())
```

	Date	Revenue
57	2006-01-31	1667
58	2005-10-31	534
59	2005-07-31	416
60	2005-04-30	475
61	2005-01-31	709

0.6 Question 5: Plot Tesla Stock Graph

Use the `make_graph` function to graph the Tesla Stock Data, also provide a title for the graph. Note the graph will only show data upto June 2021.

Hint

You just need to invoke the `make_graph` function with the required parameter to print the graph.

```

[52]: !pip install plotly

import plotly.graph_objects as go
from plotly.subplots import make_subplots
import pandas as pd

def make_graph(stock_data, revenue_data, stock):

```

```

fig = make_subplots(rows=2, cols=1, shared_xaxes=True,
↳subplot_titles=("Historical Share Price", "Historical Revenue"),
↳vertical_spacing = .3)
stock_data_specific = stock_data[stock_data.Date <= '2021-06-14']
revenue_data_specific = revenue_data[revenue_data.Date <= '2021-04-30']
fig.add_trace(go.Scatter(x=pd.to_datetime(stock_data_specific.Date),
↳y=stock_data_specific.Close.astype("float"), name="Share Price"), row=1,
↳col=1)
fig.add_trace(go.Scatter(x=pd.to_datetime(revenue_data_specific.Date),
↳y=revenue_data_specific.Revenue.astype("float"), name="Revenue"), row=2,
↳col=1)
fig.update_xaxes(title_text="Date", row=1, col=1)
fig.update_xaxes(title_text="Date", row=2, col=1)
fig.update_yaxes(title_text="Price ($US)", row=1, col=1)
fig.update_yaxes(title_text="Revenue ($US Millions)", row=2, col=1)
fig.update_layout(showlegend=False,
height=900,
title=stock,
axis_rangeslider_visible=True)
fig.show()
from IPython.display import display, HTML
fig_html = fig.to_html()
display(HTML(fig_html))

make_graph(tesla_data, tesla_revenue, 'Tesla')

```

Requirement already satisfied: plotly in /opt/conda/lib/python3.12/site-packages (6.0.1)

Requirement already satisfied: narwhals>=1.15.1 in /opt/conda/lib/python3.12/site-packages (from plotly) (1.33.0)

Requirement already satisfied: packaging in /opt/conda/lib/python3.12/site-packages (from plotly) (24.2)

<IPython.core.display.HTML object>

0.7 Question 6: Plot GameStop Stock Graph

Use the `make_graph` function to graph the GameStop Stock Data, also provide a title for the graph. The structure to call the `make_graph` function is `make_graph(gme_data, gme_revenue, 'GameStop')`. Note the graph will only show data upto June 2021.

Hint

You just need to invoke the `make_graph` function with the required parameter to print the graph.

```
[55]: make_graph(gme_data, gme_revenue, 'GameStop')
```

<IPython.core.display.HTML object>

About the Authors:

Joseph Santarcangelo has a PhD in Electrical Engineering, his research focused on using machine learning, signal processing, and computer vision to determine how videos impact human cognition. Joseph has been working for IBM since he completed his PhD.
